# Spirit of Wonder

# Pentel®

# *Welcome to the latest edition of the Pentel product catalogue!*

Pentel Co Ltd is a Japanese owned company which was founded in 1946 as a writing instrument company, with the first products consisting mainly of pencils and crayons. Since inception, Pentel Co Ltd has engaged in an ongoing quest to develop new, world class, superior quality products for consumers.

From humble beginnings, Pentel Co Ltd has grown to have large manufacturing facilities in Japan as well as factories throughout the world including France, China, Taiwan, Mexico, India, Thailand and the USA.

These factories supply a worldwide distribution network. Pentel (Australia) Pty Ltd is a vital part of this network. Established in 1967 and located at Lane Cove in Sydney, Pentel (Australia) Pty Ltd distributes product to all parts of Australia, New Zealand and the Oceania region.

Pentel's environmental programs began in 1974 when one of the Pentel factories in Japan was recognised and honoured for its waste water treatment facilities and its participation in environmentally friendly programs. ISO 9001 Quality Management Certification and ISO 14001 Environmental Management Certification is evidence of Pentel's ongoing commitment to producing quality product in an environmentally friendly manner. This pro-active approach to total quality management resulted in Pentel being awarded the Deming prize in 1976, a global prize awarded in recognition of manufacturers dedicated to product quality. Pentel remains the first and only stationery manufacturer ever to have been honoured with this award.

One result of this approach is the development of the Recycology program, which focuses on ways to reduce environmental waste through innovative product design and the use of raw materials involved in production. A Recycology product has 50% or more recycled content, excluding consumable content and refills.

This environmentally responsible line of high quality products includes presentation files, pens, markers, pencils and leads. Many of our products are packaged using recycled materials, further reducing impact on the environment.

The Recycology range is an important part of a product range that includes gel ink roller pens, ballpoint pens, fibre tip markers, highlighters, permanent markers, whiteboard markers, white permanent markers, paint markers, mechanical pencils, drafting pencils, leads, correction pens, correction tapes, erasers, glues, files, folders and art materials such as oil pastels and colour paint products.

As well as the standard packaging of goods, product is available in wallets, sets, retail hang-sell and displays.

There are many Pentel products which are industry leading products including the S520 Sign Pen, a winner of many plaudits; the Ball Pentel R50, perhaps the most famous and used pen in the writing world; the P205 Automatic Pencil, highest volume selling pencil of it's kind in the world with a lifetime guarantee; the ZL31 Correction Pen, an innovation allowing the deletion of mistakes without the mess; the Maxiflo range of whiteboard and permanent markers, with innovative pump action to maintain strong colour and steady flow of ink until the last drop; the fabulous Energel range of pens with smooth, quick drying, liquid gel ink and the archival quality gel ink contained within the KL257 range of Hyper G pens.

Some of these industry leading products have been in production for over 45 years and remain in demand, which stands as strong testament to the soundness of design and inherent quality. Many newer Pentel products will no doubt have equally distinguished longevity.

## ISO 9001 Quality Management Systems

JUSE
REGISTERED FIRM

EMS Accreditation
RE014

Our Yoshikawa, Ibaraki and Soka Factories have received a certification of ISO 14001 (Environmental Management System) respectively.

# THE ENVIRONMENT

The environment has been of prime importance when Pentel Ltd has developed product over the many years & began making strides to be GREEN back in 1974.

**Since 1995 it has completely abolished the use of substances which are harmful to the ozone layer.**

For well over fifty years Pentel has been to the forefront in developing and supplying the world with the highest quality products. To demonstrate this Pentel is the only writing instrument company to have received the Deming award for recognition of the highest standard of quality.

Pentel is committed to protecting the global environment and controlling pollution. In doing so it has not compromised the high level of quality that is synonymous with Pentel.

The "green" philosophy has been a platform for Pentel development and production and can now be recognized by the green Recycology symbol on any of the products that qualify for its use.

The Recycology symbol is used on any Pentel product that contains more than fifty percent of its weight made of recycled materials, excluding the consumable content. The formula is simple, being the weight of recycled content divided by the total weight of product referred to as a percentage.

Recycology embodies the 3R's – Reduce, Reuse and Recycle.

Pentel in Australia has produced an easy to read brochure of products that conform to the Recycology formula. This brochure clearly shows the percentage of recycled content in the product and a brief description of the product benefits and usage. Details of the contents of this brochure are easily accessible on the website www.pentel.com.au

Pentel has many quality & environmental standards certificates, including ISO 9001 & ISO 14001. It is also a member of organizations such as the Australian Packaging Covenant and Good Environmental Choice Australia.

Material Safety Data Sheets (MSDS) are available for Pentel products.

Many products are acid free, PVC free and do not include toluene or xylene.

The Pentel corporate statement "Spirit of Wonder" represents the fact that "Pentel is committed to continuously being an imaginative company to offer products that continue to be used by, and excite and thrill consumers of Pentel products". One most important way of doing this is to have products that are environmentally friendly.

Pentel environmental safety targets are not limited to conformity to qualitative or general standards, specifications and directives, but aims to achieve higher quality and lower environmental impact for products produced.

All Pentel products are backed with a lifetime warranty against defects in materials and workmanship.

It is true to say that Pentel respects the environment and is committed to the continued production of products that conform to the environmental standards expected.
